Swipe Next

02

Foster Open and Continuous Communication

Utilise retrospectives to evaluate and adjust practices.

Maintain continuous dialogue with all stakeholders.

Address and resolve issues promptly.

03

Implement Effective Sprint Planning

Set realistic goals for each sprint.

Avoid overcommitting to maintain quality.

Adapt sprint plans based on performance feedback.

04

Engage Stakeholders Regularly

Involve stakeholders in planning and review sessions

Ensure product relevance and value to users.

Collate and integrate stakeholder feedback into development.

05

Maintain a Sustainable Work Pace

Set realistic work expectations to avoid burnout.

Monitor team health and morale continuously.

Promote a balanced workload for sustained productivity.

Prioritise and Manage the Backlog **Effectively**

Keep the backlog organised and clearly prioritised.

Involve the team in backlog prioritisation decisions.

Use the backlog to guide sprint planning effectively.

07

Encourage Team Autonomy and Empowerment

Empower teams to make decisions within a framework.

Build trust and respect within the team.

Support creative and independent problem-solving.

08

Build a Culture of Continuous Improvement

Encourage iterative learning and development.

Foster an environment open to experimentation.

Celebrate improvements and encourage team feedback.

09

Align Agile Practices with Business Goals

Link Agile activities directly to business objectives.

Demonstrate how Agile adds value to business operations.

Ensure that team efforts support overall business strategy.
